

IHI Vibration Monitoring Service

Vibration data and surface temperature collected from wireless sensors sent to IoT station to show in real time dashboard. Data is automatically generated in graph formats and is easily downloaded to use. Machine deterioration and abnormality can be warned to reduce unforeseen system Interruption.

We are professional in machinery, overhaul planning and advanced maintenance. We are committed to support our customers at our best to improve efficiency and achieve smooth operation.

IHI

VIBRATION MONITORING SERVICE

WIRELESS DATA TRANSFER

How the monitoring system work

Once the monitoring parameters are detected via sensors, it could automatically transfer data to IoT Station on cloud and also can trigger alert system via mobile phones and emails.

Access to real-time monitoring information can help to reduce maintenance cost and have your machines operating at their highest efficiency.
