

# IHI LOGISTICS

Logistic innovation, your best solution is our mission

IHI's Logistics Automation Systems are engineered to tailor solutions for client's problems. Suited for the use in various conditions and circumstances.

# IHI LOGISTICS SOLUTION

## AS/RS System

IHI's Automated Retrieval and Storage system are all about space-saving, labor-saving and accurate inventory management. It covers a wide range of product line-up that is also applicable for special environment such as freezer storage and clean room application. Holding special items such as dangerous and heavy objects, even cylindrical shaped items.

### Mobile Rack

In an ordinary warehouse, there are passages for move-in/move-out between multiple racks. When this passage is not being used for handling cargo, it becomes a mere dead space. The racks can be kept in close contact under normal situations, and they can be moved to create a passage only when performing tasks to free up the dead space. This enables the storage capacity to increase 2 to 2.5 times.

### Robotic machine

IHI's various transportation machinery including AGVs, AGFs, and RGVs promote the safety and high efficiency of unmanned transportation. And our automated sorting and picking system such as Palletizing/Depalletizing robot and Skypod realize an accurate and efficient operations in a previously labor-intensive logistics industry.

We offer the optimal solutions for various industries.

### Software

The key point of warehouse or factory operations is the handling of goods and inventory control. IHI's WMS and WCS system allow automated equipment can be easily and accurately managed by anyone via a simple usage.
